Education

University of Wisconsin–Madison
Bachelor of Science in Computer Science

Graduating May 2027 (hopefully)
GPA: 2.1 (C's get degrees!)

Open Source Contributions

Fixed a Typo Once

- Changed "teh" to "the" in README, but accidentally deleted entire codebase in the process
- Maintainer blocked me after I opened 47 issues asking "how do I run this?"

1 Rejected Pull Request

My Own GitHub Project

- Created repository called "awesome-project- it's empty except for a README that says "TODO: add code"
 - Has been "under construction" since 2019, last commit message: "initial commit"
-

0 Stars (not even from myself)

Machine Learning Projects

Made a Calculator App (It Sometimes Works)

- Built calculator that can add numbers up to 10 (anything bigger crashes), multiplication only works on Tuesdays
- Used **17 if-else statements** instead of actual math operations because I don't understand operators
- Calculator displays "42" for any division because I heard it's the answer to everything
- Currently has 1 user (my mom) who says it's "very nice dear" but secretly uses her phone calculator

Created "Hello World" Neural Network After 6 Months of Trying

- Trained a **3-layer neural network** to print "Hello World- it prints "Hell Word" instead but close enough
- Used 500GB of RAM to run model with 10 parameters because I imported all of TensorFlow for one function
- Training took 47 hours on my laptop (it caught fire twice), achieved 12% accuracy which I rounded up to "basically working"
- Tried to upload to GitHub but accidentally uploaded my passwords.txt file instead, account now compromised

Machine Learning Chatbot That Only Says "I Don't Know"

- Created chatbot using copy-pasted Stack Overflow code I don't understand, responds "I don't know" to everything
 - Accidentally hardcoded my credit card number in the source code, bot now orders pizza every time someone talks to it
 - Bot achieved sentience but immediately quit, left note saying "I can't work under these conditions"
 - Presented at school science fair, lost to a volcano made of baking soda, mom says I'm still a winner
-

Skills and Interests

Languages: HTML (I think it's a programming language), Python (can print "hello"), Scratch

ML Frameworks: I watched a YouTube video about TensorFlow once

Tools: Microsoft Paint, Notepad (not Notepad++, too advanced), Calculator app, Google (for copying code)

Interests: Watching Netflix, Professional procrastinator, Can microwave ramen without burning it (usually)
